

UAN DUAL

CONCENTRATED NBPT-DCD SOLUTION

FVC 32+ is a fertilizer additive for Surface Applied UAN fertilizer that is a dual mode of action unerase and nitrification inhibitor.

GENERAL INFORMATION

FVC 32+ contains NBPT which stabilizes surface applied nitrogen by inhibiting the activity of the urease enzyme, slowing hydrolysis thus minimizing ammonia volatilization. FVC 32+ also contains DCD which slows the conversion of ammonium to nitrate by temporarily disrupting the activity of the bacteria Nitrosomonas and Nitrobacter. FVC 32+ may be used in any soil type and with any crop where best management practices call for the application of nitrogen.

ACTIVE INGREDIENTS

N-(n-butyl) thiophosphoric triamide ("NBPT").....	20%
Dicyandiamide ("DCD").....	25%

DIRECTIONS FOR USE

Caution: Only use FVC 32+ according to the label directions. Read the entire label and material safety data sheet (SDS) prior to use. Use of FVC 32+ treated fertilizer is not recommended applied next to the seed infurrow.

RECOMMENDED USE RATE

2-3 Quarts per ton

PRODUCT AVAILABILITY

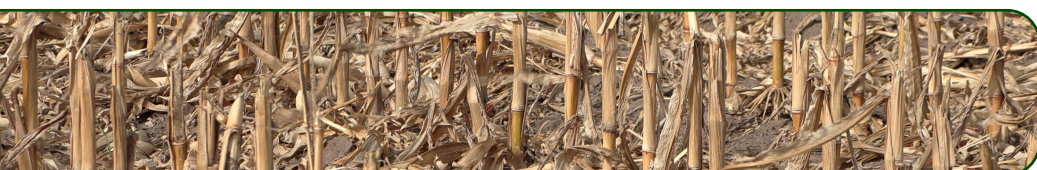

Net Contents: 250 gal

Net Weight: 2,407.5 lb

Weight per gallon: 9.63 lb
