

CARBON CYCLE™

RESIDUE & NUTRIENT MANAGEMENT

POWERED BY **MICROBILIZE™**
MICROBE TECHNOLOGY DELIVERY SYSTEM

CARBON CYCLE™ by PLATTE - Peak Crop Performance is specifically designed to break down crop residue in the field, improving planter performance, creating stronger stands and releasing valuable nutrients to feed the crop.

The patent-pending formulation of CARBON CYCLE™ is powered by the Microbilize™ Microbe Technology Delivery System. This system provides the ideal carrier to ensure that microbes stay alive in the jug and have the optimum conditions to begin multiplying and breaking down residue.

The consortium of microbes included in CARBON CYCLE™ are specifically designed to digest crop residue and cycle nutrients back to the soil profile. Additionally, these microbes build improved soil tilth, reduce disease pressure and generate overall increased biological activity.

DIRECTIONS FOR USE

Apply CARBON CYCLE™ to any crop residue.

FALL APPLICATIONS

Apply immediately after harvest for best performance.

SPRING APPLICATIONS

Apply with early herbicide application or in the termination of cover crops.

SUMMER APPLICATIONS

Ideal for breaking down wheat stubble. Specific timing for optimal use varies based on tillage practices, fertility levels and other factors. Contact your agronomist or PLATTE-Peak for specific recommendations.

Works well with irrigation systems.

RECOMMENDED USE RATE

Apply 12.8 oz per acre with a minimum 10 gal of water. Highly compatible tank mix partner with most herbicide and fertility programs.
